Practice Paper with Solutions

JEE Main 2025 - Paper 1

B.E. / B.Tech Entrance Examination

Conducted by National Testing Agency (NTA)

Exam Pattern & Instructions

3 Hours
180 Minutes

75
Total Questions

300
Maximum Marks

Question Distribution

Subject	MCQs	Numerical	Total
Physics	20	5	25
Chemistry	20	5	25
Mathematics	20	5	25
Total	**60**	**15**	**75**

Marking Scheme

- Correct answer: **+4 marks**
- Wrong MCQ answer: **-1 mark**
- Wrong Numerical answer: **No negative marking**
- Unattempted: **0 marks**

General Instructions

- All questions are compulsory.
- This paper consists of 3 sections: Physics, Chemistry, and Mathematics.
- Each section contains 20 MCQs and 5 Numerical Value Questions.
- MCQs have 4 options with only one correct answer.
- Numerical Value Questions require you to type the answer (no options provided).
- Use of calculator is not permitted.
- Use of log tables is permitted where required.
- Exam is conducted in Computer Based Test (CBT) mode.

Physics

20 MCQs + 5 Numerical Value Questions

SECTION A - MULTIPLE CHOICE QUESTIONS

1 MCQ +4 for correct, -1 for wrong

A body of mass 2 kg is moving with a velocity of $\vec{v} = 3\hat{i} + 4\hat{j}$ m/s. The magnitude of the momentum of the body is:

(A) 10 kg m/s

(B) 14 kg m/s

(C) 7 kg m/s

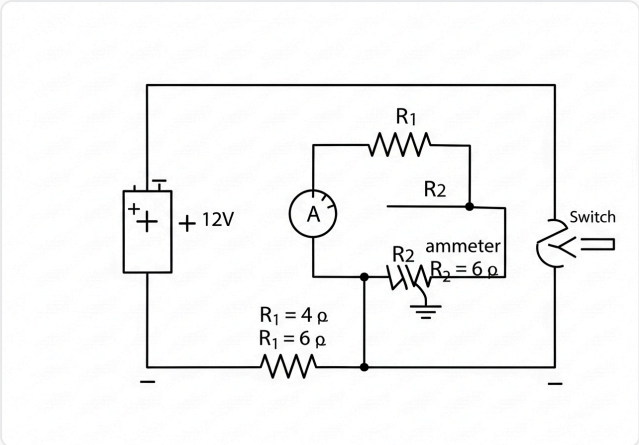
(D) 5 kg m/s

Answer: 10 kg m/s

Solution: Momentum $\vec{p} = m\vec{v}$. Magnitude $|\vec{p}| = m|\vec{v}| = 2 \times \sqrt{3^2 + 4^2} = 2 \times 5 = 10$ kg m/s.

2 MCQ +4 for correct, -1 for wrong

In the circuit shown below, find the total current drawn from the battery.



(A) 5 A

(B) 3 A

(C) 2.5 A

(D) 7.2 A

Answer: 5 A

Solution: Resistors are in parallel. $\frac{1}{R_{eq}} = \frac{1}{4} + \frac{1}{6} = \frac{5}{12}$. So $R_{eq} = 2.4\,\Omega$. Current $I = \frac{V}{R_{eq}} = \frac{12}{2.4} = 5$ A.

3 MCQ +4 for correct, -1 for wrong

The de Broglie wavelength associated with an electron accelerated through a potential difference of V volts is given by:

(A) $\lambda = \frac{1.227}{\sqrt{V}}$ nm

(B) $\lambda = \frac{0.529}{V}$ nm

(C) $\lambda = \frac{h}{\sqrt{2meV}}$

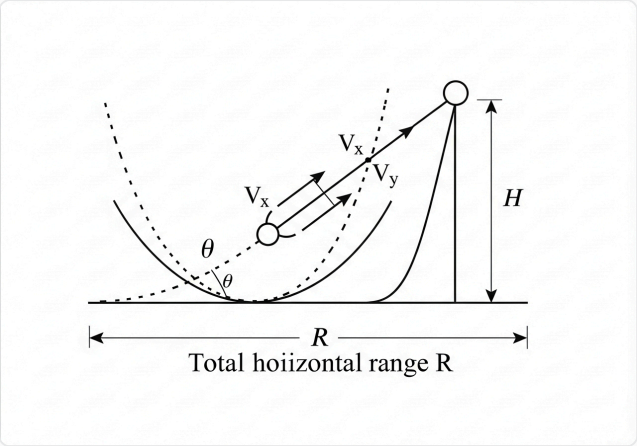
(D) Both (A) and (C)

Answer: Both (A) and (C)

Solution: The de Broglie wavelength is $\lambda = \frac{h}{p} = \frac{h}{\sqrt{2mE_k}} = \frac{h}{\sqrt{2meV}}$. Substituting values gives $\lambda = \frac{1.227}{\sqrt{V}}$ nm. So both (A) and (C) are correct.

4 MCQ +4 for correct, -1 for wrong

A projectile is launched from ground level at an angle θ with the horizontal. Refer to the diagram below. If the initial speed is u, the maximum height H is:



(A) $\frac{u^2 \sin^2 \theta}{2g}$

(B) $\frac{u^2 \cos^2 \theta}{2g}$

(C) $\frac{u^2 \sin 2\theta}{g}$

(D) $\frac{u^2}{2g}$

Answer: $\frac{u^2 \sin^2 \theta}{2g}$

Solution: At maximum height, vertical velocity is zero. Using $v_y^2 = u_y^2 - 2gH$, we get $0 = u^2 \sin^2 \theta - 2gH$, so $H = \frac{u^2 \sin^2 \theta}{2g}$.

5 MCQ +4 for correct, -1 for wrong

The electric field at a distance r from an infinitely long uniformly charged wire with linear charge density λ is:

(A) $E = \frac{\lambda}{2\pi\epsilon_0 r}$

(B) $E = \frac{\lambda}{4\pi\epsilon_0 r^2}$

(C) $E = \frac{\lambda}{\epsilon_0}$

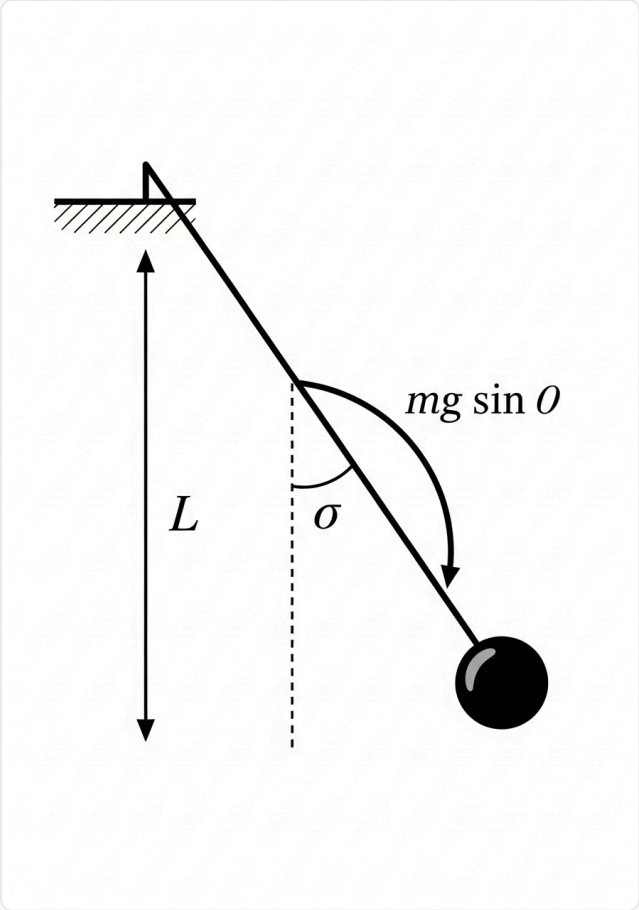
(D) $E = \frac{\lambda r}{2\epsilon_0}$

Answer: $E = \frac{\lambda}{2\pi\epsilon_0 r}$

Solution: Using Gauss's law with a cylindrical Gaussian surface of radius r and length l: $E \cdot 2\pi r l = \frac{\lambda l}{\epsilon_0}$. Thus $E = \frac{\lambda}{2\pi\epsilon_0 r}$.

6 MCQ +4 for correct, -1 for wrong

A simple pendulum of length L is displaced by a small angle θ from its equilibrium position as shown in the figure. The time period of oscillation is:



(A) $T = 2\pi\sqrt{\frac{L}{g}}$

(B) $T = 2\pi\sqrt{\frac{g}{L}}$

(C) $T = \pi\sqrt{\frac{L}{g}}$

(D) $T = 2\pi\frac{L}{g}$

Answer: $T = 2\pi\sqrt{\frac{L}{g}}$

Solution: For small oscillations, the restoring torque is $\tau = -mgL\sin\theta \approx -mgL\theta$. This gives SHM with $\omega = \sqrt{\frac{g}{L}}$, so $T = \frac{2\pi}{\omega} = 2\pi\sqrt{\frac{L}{g}}$.

7 MCQ +4 for correct, -1 for wrong

Two coherent sources produce interference pattern. The ratio of maximum to minimum intensity is 25:1. The ratio of amplitudes of the two waves is:

(A) 5:1

(B) 3:2

(C) 2:1

(D) 4:1

Answer: 3:2

Solution: $\frac{I_{max}}{I_{min}} = \frac{(a_1+a_2)^2}{(a_1-a_2)^2} = \frac{25}{1}$. So $\frac{a_1+a_2}{a_1-a_2} = 5$. Let $a_1 = 5k, a_2 = k$ doesn't work. Solving: $a_1 + a_2 = 5(a_1 - a_2) \Rightarrow 4a_2 = 4a_1$... Actually $a_1 + a_2 = 5a_1 - 5a_2 \Rightarrow 6a_2 = 4a_1 \Rightarrow \frac{a_1}{a_2} = \frac{3}{2}$.

8 MCQ +4 for correct, -1 for wrong

The work function of a metal is 4.2 eV. What is the threshold wavelength for photoelectric emission?

(A) 295 nm

(B) 310 nm

(C) 350 nm

(D) 420 nm

Answer: 295 nm

Solution: Threshold wavelength $\lambda_0 = \frac{hc}{\phi} = \frac{6.63\times10^{-34}\times3\times10^{8}}{4.2\times1.6\times10^{-19}} = \frac{1.989\times10^{-25}}{6.72\times10^{-19}} \approx 2.96 \times 10^{-7}$ m = 296 nm $\approx$ 295 nm.

9 MCQ +4 for correct, -1 for wrong

A uniform magnetic field $\vec{B} = 0.5\hat{k}$ T exists in a region. A charged particle with charge $q = 2$ C and mass $m = 1$ kg enters the field with velocity $\vec{v} = 4\hat{i}$ m/s. The radius of the circular path is:

(A) 4 m

(B) 2 m

(C) 8 m

(D) 1 m

Answer: 4 m

Solution: Radius of circular motion $r = \frac{mv}{qB} = \frac{1\times4}{2\times0.5} = \frac{4}{1} = 4$ m.

10 MCQ +4 for correct, -1 for wrong

A gas expands isothermally from volume V_1 to V_2. The work done by the gas is:

(A) $W = nRT \ln \frac{V_2}{V_1}$

(B) $W = nR(T_2 - T_1)$

(C) $W = P(V_2 - V_1)$

(D) $W = \frac{nRT}{V_2 - V_1}$

Answer: $W = nRT \ln \frac{V_2}{V_1}$

Solution: For isothermal process, $PV = nRT = \text{const}$. Work $W = \int_{V_1}^{V_2} P\,dV = \int_{V_1}^{V_2} \frac{nRT}{V} dV = nRT \ln \frac{V_2}{V_1}$.

11 MCQ +4 for correct, -1 for wrong

The escape velocity from the surface of the Earth is v_e. If the radius of the Earth is doubled and mass remains the same, the new escape velocity will be:

(A) $\frac{v_e}{\sqrt{2}}$

(B) $\frac{v_e}{2}$

(C) $v_e\sqrt{2}$

(D) $2v_e$

Answer: $\frac{v_e}{\sqrt{2}}$

Solution: Escape velocity $v_e = \sqrt{\frac{2GM}{R}}$. If $R' = 2R$, then $v_e' = \sqrt{\frac{2GM}{2R}} = \frac{v_e}{\sqrt{2}}$.

12 MCQ +4 for correct, -1 for wrong

In a Young's double slit experiment, the fringe width is found to be 0.4 mm. If the whole apparatus is immersed in water of refractive index 4/3, the new fringe width will be:

(A) 0.3 mm

(B) 0.53 mm

(C) 0.4 mm

(D) 0.2 mm

Answer: 0.3 mm

Solution: Fringe width $\beta = \frac{\lambda D}{d}$. In water, $\lambda' = \frac{\lambda}{\mu}$. So $\beta' = \frac{\beta}{\mu} = \frac{0.4}{4/3} = 0.4 \times \frac{3}{4} = 0.3$ mm.

13 MCQ +4 for correct, -1 for wrong

A transformer has 500 turns in the primary coil and 5000 turns in the secondary coil. If the primary voltage is 220 V, what is the secondary voltage?

(A) 2200 V

(B) 22 V

(C) 1100 V

(D) 4400 V

Answer: 2200 V

Solution: For a transformer: $\frac{V_s}{V_p} = \frac{N_s}{N_p}$. So $V_s = 220 \times \frac{5000}{500} = 220 \times 10 = 2200$ V.

14 MCQ +4 for correct, -1 for wrong

The moment of inertia of a solid sphere about its diameter is:

(A) $\frac{2}{5}MR^2$

(B) $\frac{2}{3}MR^2$

(C) $\frac{1}{2}MR^2$

(D) MR^2

Answer: $\frac{2}{5}MR^2$

Solution: The moment of inertia of a solid sphere about its diameter is $I = \frac{2}{5}MR^2$. This is a standard result derived by integrating thin spherical shells.

15 MCQ +4 for correct, -1 for wrong

A wire of resistance 12 ohm is bent into a circle. The effective resistance between two diametrically opposite points is:

(A) 3 ohm

(B) 6 ohm

(C) 12 ohm

(D) 24 ohm

Answer: 3 ohm

Solution: When bent into a circle, each half has resistance 6 ohm. Between diametrically opposite points, these two halves are in parallel. $R_{eq} = \frac{6\times6}{6+6} = 3$ ohm.

16 MCQ +4 for correct, -1 for wrong

The speed of light in a medium of refractive index 1.5 is:

(A) 2×10^8 m/s

(B) 3×10^8 m/s

(C) 1.5×10^8 m/s

(D) 4.5×10^8 m/s

Answer: 2×10^8 m/s

Solution: Speed of light in a medium $v = \frac{c}{\mu} = \frac{3\times10^8}{1.5} = 2 \times 10^8$ m/s.

17 MCQ +4 for correct, -1 for wrong

A body starts from rest and moves with uniform acceleration. The ratio of distances covered in the 1st, 2nd, and 3rd seconds is:

(A) 1:2:3

(B) 1:3:5

(C) 1:4:9

(D) 1:1:1

Answer: 1:3:5

Solution: Distance covered in the nth second is $s_n = u + \frac{a}{2}(2n-1)$. With $u = 0$: $s_1 : s_2 : s_3 = 1 : 3 : 5$.

18 MCQ +4 for correct, -1 for wrong

The dimensional formula of Planck's constant is:

(A) $[ML^2T^{-1}]$

(B) $[MLT^{-1}]$

(C) $[ML^2T^{-2}]$

(D) $[ML^{-1}T^{-2}]$

Answer: $[ML^2T^{-1}]$

Solution: Planck's constant $h = \frac{E}{\nu}$. Dimensions: $\frac{[ML^2T^{-2}]}{[T^{-1}]} = [ML^2T^{-1}]$.

19 MCQ +4 for correct, -1 for wrong

The energy of a photon of wavelength 6200 angstrom is (use $h = 6.63 \times 10^{-34}$ Js):

(A) 3.2×10^{-19} J

(B) 2.0×10^{-19} J

(C) 6.4×10^{-19} J

(D) 1.6×10^{-19} J

Answer: 3.2×10^{-19} J

Solution: $E = \frac{hc}{\lambda} = \frac{6.63 \times 10^{-34} \times 3 \times 10^{8}}{6200 \times 10^{-10}} = \frac{1.989 \times 10^{-25}}{6.2 \times 10^{-7}} \approx 3.2 \times 10^{-19}$ J.

20 MCQ +4 for correct, -1 for wrong

An ideal gas undergoes an adiabatic process. Which of the following is true?

(A) $PV^{\gamma} = \text{constant}$

(B) $PV = \text{constant}$

(C) $\frac{P}{V} = \text{constant}$

(D) $P^{\gamma}V = \text{constant}$

Answer: $PV^{\gamma} = \text{constant}$

Solution: For an adiabatic process in an ideal gas, $PV^{\gamma} = \text{constant}$, where $\gamma = C_p/C_v$ is the heat capacity ratio.

SECTION B - NUMERICAL VALUE QUESTIONS

21 Numerical +4 for correct, 0 for wrong

A particle moves along the x-axis such that its position is given by $x = 3t^2 - 2t + 5$ metres. Find the acceleration (in m/s^2) of the particle.

Answer: 6

Solution: $x = 3t^2 - 2t + 5$. Velocity $v = \frac{dx}{dt} = 6t - 2$. Acceleration $a = \frac{dv}{dt} = 6$ m/s^2.

22 Numerical +4 for correct, 0 for wrong

Two charges of $+3\,\mu C$ and $+12\,\mu C$ are placed 30 cm apart. Find the distance (in cm) from the $+3\,\mu C$ charge where the electric field is zero.

Answer: 10

Solution: Let the point be at distance x from $+3\mu C$. Then $\frac{kq_1}{x^2} = \frac{kq_2}{(0.3-x)^2} \Rightarrow \frac{3}{x^2} = \frac{12}{(0.3-x)^2} \Rightarrow (0.3-x)^2 = 4x^2 \Rightarrow 0.3 - x = 2x \Rightarrow x = 0.1$ m = 10 cm.

23 Numerical +4 for correct, 0 for wrong

A convex lens of focal length 20 cm forms an image of an object placed 30 cm from it. Find the image distance (in cm).

Answer: 60

Solution: Using lens formula: $\frac{1}{v} - \frac{1}{u} = \frac{1}{f}$. Here $u = -30$ cm, $f = 20$ cm. $\frac{1}{v} = \frac{1}{20} + \frac{1}{-30}$... Actually $\frac{1}{v} = \frac{1}{f} + \frac{1}{u} = \frac{1}{20} - \frac{1}{30} = \frac{1}{60}$. So $v = 60$ cm.

24 Numerical +4 for correct, 0 for wrong

A 500 g ball moving at 10 m/s collides with a stationary 300 g ball. After collision, the 500 g ball moves at 4 m/s. Find the velocity (in m/s) of the 300 g ball after collision.

Answer: 10

Solution: By conservation of momentum: $m_1u_1 + m_2u_2 = m_1v_1 + m_2v_2$. $0.5 \times 10 + 0 = 0.5 \times 4 + 0.3 \times v_2$. $5 = 2 + 0.3v_2 \Rightarrow v_2 = \frac{3}{0.3} = 10$ m/s.

25 Numerical +4 for correct, 0 for wrong

An electron in the $n = 4$ state of hydrogen atom makes a transition to $n = 2$ state. If the Rydberg constant $R = 1.097 \times 10^7$ m^{-1}, find the wavenumber of emitted photon (in 10^6 m^{-1}).

Answer: 2.06

Solution: $\frac{1}{\lambda} = R\left(\frac{1}{n_1^2} - \frac{1}{n_2^2}\right) = 1.097 \times 10^7 \left(\frac{1}{4} - \frac{1}{16}\right) = 1.097 \times 10^7 \times \frac{3}{16} = 2.057 \times 10^6$ m^{-1} $\approx 2.06 \times 10^6$ m^{-1}.

Chemistry

20 MCQs + 5 Numerical Value Questions

SECTION A - MULTIPLE CHOICE QUESTIONS

26 MCQ +4 for correct, -1 for wrong

The IUPAC name of the compound $CH_3 - CH = CH - CHO$ is:

(A) But-2-enal

(B) But-3-enal

(C) 2-Butenal

(D) Crotonaldehyde

Answer: But-2-enal

Solution: The compound has 4 carbons with a double bond at position 2 and an aldehyde group. IUPAC name is But-2-enal. Crotonaldehyde is its common name.

27 MCQ +4 for correct, -1 for wrong

Which of the following molecules has the highest bond order?

(A) N_2

(B) O_2

(C) F_2

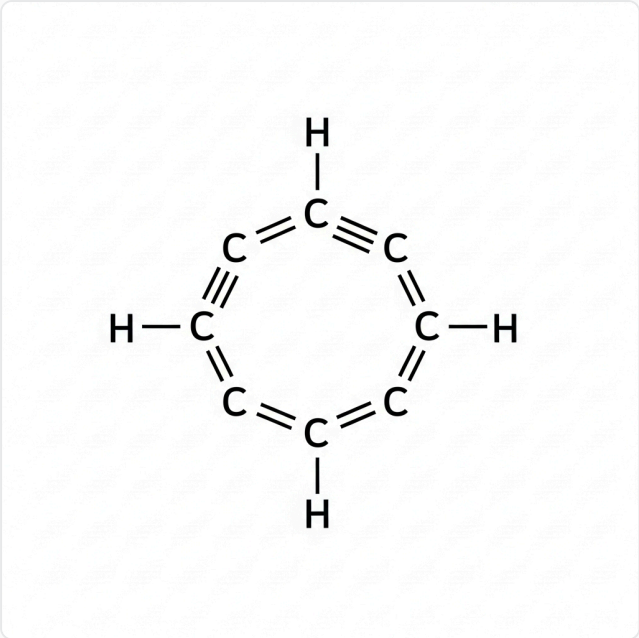
(D) C_2

Answer: N_2

Solution: Bond orders: $N_2 = 3$, $O_2 = 2$, $F_2 = 1$, $C_2 = 2$. N_2 has the highest bond order of 3 (triple bond).

28 MCQ +4 for correct, -1 for wrong

The structure of benzene is shown below. The number of sigma (σ) bonds in benzene is:



(A) 12

(B) 6

(C) 9

(D) 3

Answer: 12

Solution: Benzene (C_6H_6) has 6 C-C sigma bonds and 6 C-H sigma bonds = 12 sigma bonds. The 3 pi bonds are delocalized across the ring.

29 MCQ +4 for correct, -1 for wrong

The pH of a 0.001 M HCl solution is:

(A) 3

(B) 4

(C) 2

(D) 1

Answer: 3

Solution: HCl is a strong acid and dissociates completely. $[H^+] = 0.001 = 10^{-3}$ M. pH $= -\log[H^+] = -\log(10^{-3}) = 3$.

30 MCQ +4 for correct, -1 for wrong

According to the ideal gas equation $PV = nRT$, the value of gas constant R in SI units is:

(A) 8.314 J mol^{-1} K^{-1}

(B) 0.0821 L atm mol^{-1} K^{-1}

(C) 1.987 cal mol^{-1} K^{-1}

(D) 62.36 L torr mol^{-1} K^{-1}

Answer: 8.314 J mol^{-1} K^{-1}

Solution: The SI unit of R is J mol^{-1} K^{-1} and its value is 8.314. Other options are in non-SI units.

31 MCQ +4 for correct, -1 for wrong

The hybridization of carbon in ethylene (C_2H_4) is:

(A) sp^2

(B) sp^3

(C) sp

(D) sp^3d

Answer: sp^2

Solution: In ethylene, each carbon forms 2 C-H bonds, 1 C-C sigma bond, and 1 C=C pi bond. The sigma framework involves 3 hybrid orbitals, making it sp^2 hybridized.

32 MCQ +4 for correct, -1 for wrong

The standard electrode potential of Zn^{2+}/Zn is -0.76 V and that of Cu^{2+}/Cu is $+0.34$ V. The EMF of a Daniell cell is:

(A) 1.10 V

(B) 0.42 V

(C) 1.52 V

(D) 0.76 V

Answer: 1.10 V

Solution: $E^\circ_{cell} = E^\circ_{cathode} - E^\circ_{anode} = 0.34 - (-0.76) = 0.34 + 0.76 = 1.10$ V.

33 MCQ +4 for correct, -1 for wrong

The number of unpaired electrons in Fe^{3+} (atomic number of Fe = 26) is:

(A) 5

(B) 4

(C) 3

(D) 6

Answer: 5

Solution: Fe has electronic configuration [Ar] $3d^6$ $4s^2$. Fe^{3+} loses 3 electrons: [Ar] $3d^5$. In d^5, all 5 electrons are unpaired (one in each d orbital).

34 MCQ +4 for correct, -1 for wrong

Which of the following is the correct order of acidic strength?

(A) $HClO_4 > HClO_3 > HClO_2 > HClO$

(B) $HClO > HClO_2 > HClO_3 > HClO_4$

(C) $HClO_2 > HClO_4 > HClO > HClO_3$

(D) All have equal strength

Answer: $HClO_4 > HClO_3 > HClO_2 > HClO$

Solution: As the number of oxygen atoms increases, the oxidation state of Cl increases, making the O-H bond more polar and easier to ionize. Hence $HClO_4$ is the strongest acid.

35 MCQ +4 for correct, -1 for wrong

The enthalpy change for the reaction $2H_2(g) + O_2(g) \rightarrow 2H_2O(l)$ is -572 kJ. The enthalpy of formation of water is:

(A) -286 kJ/mol

(B) -572 kJ/mol

(C) $+286$ kJ/mol

(D) -143 kJ/mol

Answer: -286 kJ/mol

Solution: The enthalpy of formation is for the formation of 1 mole of compound. $\Delta H_f = \frac{-572}{2} = -286$ kJ/mol.

36 MCQ +4 for correct, -1 for wrong

The coordination number of Cr in $[Cr(NH_3)_4Cl_2]^+$ is:

(A) 6

(B) 4

(C) 2

(D) 5

Answer: 6

Solution: Coordination number is the total number of ligand donor atoms bonded to the metal. 4 NH_3 + 2 Cl^- = 6 monodentate ligands, so coordination number = 6.

37 MCQ +4 for correct, -1 for wrong

Which of the following is an example of a nucleophilic substitution reaction?

(A) $CH_3Br + OH^- \rightarrow CH_3OH + Br^-$

(B) $CH_4 + Cl_2 \rightarrow CH_3Cl + HCl$

(C) $C_2H_4 + HBr \rightarrow C_2H_5Br$

(D) $C_6H_6 + Br_2 \rightarrow C_6H_5Br + HBr$

Answer: $CH_3Br + OH^- \rightarrow CH_3OH + Br^-$

Solution: In this reaction, OH^- (nucleophile) replaces Br^- (leaving group). This is a classic S_N2 nucleophilic substitution.

38 MCQ +4 for correct, -1 for wrong

The shape of SF_6 molecule is:

(A) Octahedral

(B) Tetrahedral

(C) Trigonal bipyramidal

(D) Square planar

Answer: Octahedral

Solution: S in SF_6 has 6 bond pairs and 0 lone pairs. According to VSEPR theory, 6 electron pairs around the central atom adopt octahedral geometry.

39 MCQ +4 for correct, -1 for wrong

The van't Hoff factor (i) for 0.1 M NaCl solution that is 90% dissociated is:

(A) 1.9

(B) 1.0

(C) 2.0

(D) 0.9

Answer: 1.9

Solution: NaCl $\rightarrow$ Na^+ + Cl^-. $i = 1 + \alpha(n-1)$, where $\alpha = 0.9$ and $n = 2$. So $i = 1 + 0.9(2-1) = 1 + 0.9 = 1.9$.

40 MCQ +4 for correct, -1 for wrong

The quantum numbers for the last electron in sodium (Na, Z = 11) are:

(A) $n = 3, l = 0, m_l = 0, m_s = +\frac{1}{2}$

(B) $n = 2, l = 1, m_l = 0, m_s = -\frac{1}{2}$

(C) $n = 3, l = 1, m_l = 0, m_s = +\frac{1}{2}$

(D) $n = 3, l = 0, m_l = 1, m_s = +\frac{1}{2}$

Answer: $n = 3, l = 0, m_l = 0, m_s = +\frac{1}{2}$

Solution: Na: $1s^2\ 2s^2\ 2p^6\ 3s^1$. The last electron is in 3s orbital. So $n = 3, l = 0, m_l = 0, m_s = +\frac{1}{2}$.

41 MCQ +4 for correct, -1 for wrong

The rate law for a first-order reaction is:

(A) $k = \frac{2.303}{t} \log \frac{[A]_0}{[A]}$

(B) $k = \frac{1}{t}\left(\frac{1}{[A]} - \frac{1}{[A]_0}\right)$

(C) $k = \frac{[A]_0 - [A]}{t}$

(D) $k = \frac{1}{2t}\left(\frac{1}{[A]^2} - \frac{1}{[A]_0^2}\right)$

Answer: $k = \frac{2.303}{t} \log \frac{[A]_0}{[A]}$

Solution: For first-order reaction, $-\frac{d[A]}{dt} = k[A]$. Integrating: $\ln \frac{[A]_0}{[A]} = kt$, or $k = \frac{2.303}{t} \log \frac{[A]_0}{[A]}$.

42 MCQ +4 for correct, -1 for wrong

The boiling point of water at 1 atm pressure is 100 degrees Celsius. At higher altitude, water boils at:

(A) Temperature less than 100 degrees Celsius

(B) Temperature greater than 100 degrees Celsius

(C) Exactly 100 degrees Celsius

(D) Cannot be determined

Answer: Temperature less than 100 degrees Celsius

Solution: At higher altitude, atmospheric pressure is lower. Since boiling occurs when vapour pressure equals atmospheric pressure, lower pressure means lower boiling point.

43 MCQ +4 for correct, -1 for wrong

In the Nernst equation $E = E^\circ - \frac{RT}{nF} \ln Q$, the term n represents:

(A) Number of electrons transferred

(B) Number of moles of reactant

(C) Avogadro's number

(D) Number of ions in solution

Answer: Number of electrons transferred

Solution: In the Nernst equation, n represents the number of moles of electrons transferred in the balanced redox reaction. F is Faraday's constant.

44 MCQ +4 for correct, -1 for wrong

Which of the following compounds shows optical isomerism?

(A) 2-Butanol

(B) 2-Propanol

(C) Methanol

(D) Dimethyl ether

Answer: 2-Butanol

Solution: 2-Butanol ($CH_3CHOHCH_2CH_3$) has a chiral centre (the carbon attached to OH, H, CH_3, and C_2H_5). All four groups are different, so it shows optical isomerism.

45 MCQ +4 for correct, -1 for wrong

The Gibbs free energy change ΔG for a spontaneous reaction at constant temperature and pressure is:

(A) $\Delta G < 0$

(B) $\Delta G > 0$

(C) $\Delta G = 0$

(D) Cannot be determined

Answer: $\Delta G < 0$

Solution: A reaction is spontaneous when $\Delta G < 0$. This follows from the second law of thermodynamics: $\Delta G = \Delta H - T\Delta S$.

SECTION B - NUMERICAL VALUE QUESTIONS

46 Numerical +4 for correct, 0 for wrong

Calculate the molarity of a solution containing 4.9 g of H_2SO_4 dissolved in 500 mL of solution. (Molar mass of H_2SO_4 = 98 g/mol)

Answer: 0.1

Solution: Moles of H_2SO_4 = $\frac{4.9}{98} = 0.05$ mol. Volume = 500 mL = 0.5 L. Molarity = $\frac{0.05}{0.5} = 0.1$ M.

47 Numerical +4 for correct, 0 for wrong

The half-life of a first-order reaction is 693 seconds. Calculate the rate constant (in 10^{-3} s^{-1}).

Answer: 1

Solution: For first-order: $t_{1/2} = \frac{0.693}{k}$. So $k = \frac{0.693}{693} = 10^{-3}$ $s^{-1} = 1 \times 10^{-3}$ s^{-1}.

48 Numerical +4 for correct, 0 for wrong

How many grams of NaOH (molar mass = 40 g/mol) are required to prepare 250 mL of 0.2 M solution?

Answer: 2

Solution: Moles = Molarity $\times$ Volume(L) = 0.2 $\times$ 0.25 = 0.05 mol. Mass = 0.05 $\times$ 40 = 2 g.

49 Numerical +4 for correct, 0 for wrong

The equilibrium constant K_c for the reaction $A \rightleftharpoons 2B$ is 4. If the initial concentration of A is 1 M and no B is present, find the equilibrium concentration of B (in M).

Answer: 1.24

Solution: Let x mol/L of A dissociate. At equilibrium: [A] = 1-x, [B] = 2x. $K_c = \frac{(2x)^2}{1-x} = 4$. $4x^2 = 4 - 4x \Rightarrow x^2 + x - 1 = 0 \Rightarrow x = \frac{-1+\sqrt{5}}{2} \approx 0.618$. [B] = 2(0.618) = 1.236 ≈ 1.24 M.

50 Numerical +4 for correct, 0 for wrong

Calculate the oxidation state of Mn in $KMnO_4$.

Answer: 7

Solution: In $KMnO_4$: K = +1, O = -2. Let Mn = x. +1 + x + 4(-2) = 0. x = +7.

Mathematics

20 MCQs + 5 Numerical Value Questions

SECTION A - MULTIPLE CHOICE QUESTIONS

51 MCQ +4 for correct, -1 for wrong

The value of $\int_0^{\pi/2} \sin^2 x \, dx$ is:

(A) $\frac{\pi}{4}$

(B) $\frac{\pi}{2}$

(C) 1

(D) $\frac{1}{2}$

Answer: $\frac{\pi}{4}$

Solution: Using $\sin^2 x = \frac{1-\cos 2x}{2}$: $\int_0^{\pi/2} \frac{1-\cos 2x}{2} dx = \frac{1}{2}\left[x - \frac{\sin 2x}{2}\right]_0^{\pi/2} = \frac{1}{2}\left(\frac{\pi}{2} - 0\right) = \frac{\pi}{4}$.

52 MCQ +4 for correct, -1 for wrong

If $f(x) = x^3 - 3x^2 + 2$, then $f'(x) = 0$ at:

(A) $x = 0$ and $x = 2$

(B) $x = 1$ and $x = 3$

(C) $x = -1$ and $x = 2$

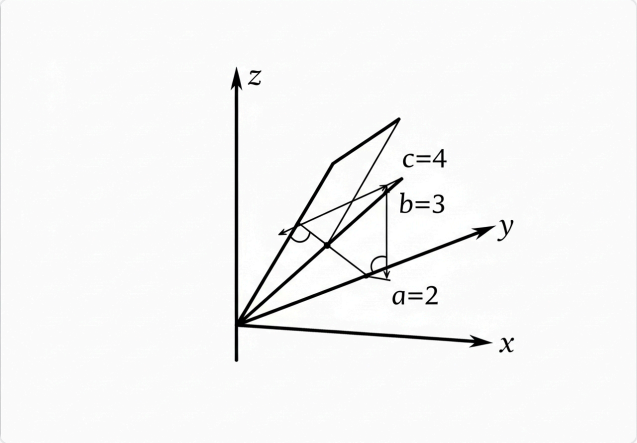
(D) $x = 0$ and $x = 3$

Answer: $x = 0$ and $x = 2$

Solution: $f'(x) = 3x^2 - 6x = 3x(x - 2)$. Setting $f'(x) = 0$: $x = 0$ or $x = 2$.

53 MCQ +4 for correct, -1 for wrong

The equation of the plane with intercepts $a = 2, b = 3, c = 4$ on the coordinate axes is shown in the figure. Its equation is:



(A) $6x + 4y + 3z = 12$

(B) $2x + 3y + 4z = 12$

(C) $x + y + z = 9$

(D) $3x + 2y + z = 6$

Answer: $6x + 4y + 3z = 12$

Solution: Intercept form: $\frac{x}{a} + \frac{y}{b} + \frac{z}{c} = 1 \Rightarrow \frac{x}{2} + \frac{y}{3} + \frac{z}{4} = 1$. Multiplying by 12: $6x + 4y + 3z = 12$.

54 MCQ +4 for correct, -1 for wrong

The sum of the series $\sum_{n=1}^{\infty} \frac{1}{2^n}$ is:

(A) 1

(B) 2

(C) $\frac{1}{2}$

(D) ∞

Answer: 1

Solution: This is a geometric series with first term $a = \frac{1}{2}$ and ratio $r = \frac{1}{2}$. Sum $= \frac{a}{1-r} = \frac{1/2}{1-1/2} = \frac{1/2}{1/2} = 1$.

55 MCQ +4 for correct, -1 for wrong

The determinant $\begin{vmatrix} 1 & 2 & 3 \\ 4 & 5 & 6 \\ 7 & 8 & 9 \end{vmatrix}$ equals:

(A) 0

(B) 1

(C) -1

(D) 3

Answer: 0

Solution: Expanding: $1(45-48) - 2(36-42) + 3(32-35) = 1(-3) - 2(-6) + 3(-3) = -3 + 12 - 9 = 0$. Or note $R_3 = 2R_2 - R_1$, so rows are linearly dependent.

56 MCQ +4 for correct, -1 for wrong

The general solution of $\frac{dy}{dx} = \frac{y}{x}$ is:

(A) $y = Cx$

(B) $y = Ce^x$

(C) $y = C \ln x$

(D) $y = Cx^2$

Answer: $y = Cx$

Solution: Separating variables: $\frac{dy}{y} = \frac{dx}{x}$. Integrating: $\ln|y| = \ln|x| + C_1$. So $y = Cx$ where $C = \pm e^{C_1}$.

57 MCQ +4 for correct, -1 for wrong

If $\vec{a} = 2\hat{i} + 3\hat{j} - \hat{k}$ and $\vec{b} = \hat{i} - 2\hat{j} + 2\hat{k}$, then $\vec{a} \cdot \vec{b}$ is:

(A) -6

(B) 6

(C) 0

(D) -2

Answer: -6

Solution: $\vec{a} \cdot \vec{b} = (2)(1) + (3)(-2) + (-1)(2) = 2 - 6 - 2 = -6$.

58 MCQ +4 for correct, -1 for wrong

The locus of a point equidistant from two fixed points A and B is:

(A) The perpendicular bisector of segment AB

(B) A circle with AB as diameter

(C) A parabola with focus at A

(D) A line through A and B

Answer: The perpendicular bisector of segment AB

Solution: The set of all points equidistant from A and B forms the perpendicular bisector of segment AB. This is a fundamental result in coordinate geometry.

59 MCQ +4 for correct, -1 for wrong

The value of $\lim_{x \to 0} \frac{\sin x}{x}$ is:

(A) 1

(B) 0

(C) ∞

(D) Does not exist

Answer: 1

Solution: This is a standard limit. Using L'Hopital's rule or the squeeze theorem: $\lim_{x \to 0} \frac{\sin x}{x} = 1$.

60 MCQ +4 for correct, -1 for wrong

The number of ways to arrange 5 books on a shelf is:

(A) 120

(B) 24

(C) 60

(D) 720

Answer: 120

Solution: Number of arrangements = $5! = 5 \times 4 \times 3 \times 2 \times 1 = 120$.

61 MCQ +4 for correct, -1 for wrong

The eccentricity of the ellipse $\frac{x^2}{25} + \frac{y^2}{16} = 1$ is:

(A) $\frac{3}{5}$

(B) $\frac{4}{5}$

(C) $\frac{5}{3}$

(D) $\frac{1}{2}$

Answer: $\frac{3}{5}$

Solution: For ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$: $a^2 = 25, b^2 = 16$. $c^2 = a^2 - b^2 = 9$, so $c = 3$. Eccentricity $e = \frac{c}{a} = \frac{3}{5}$.

62 MCQ +4 for correct, -1 for wrong

If $A = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}$, then A^{-1} is:

(A) $\begin{pmatrix} -2 & 1 \\ 3/2 & -1/2 \end{pmatrix}$

(B) $\begin{pmatrix} 4 & -2 \\ -3 & 1 \end{pmatrix}$

(C) $\begin{pmatrix} 1 & -2 \\ -3 & 4 \end{pmatrix}$

(D) Does not exist

Answer: $\begin{pmatrix} -2 & 1 \\ 3/2 & -1/2 \end{pmatrix}$

Solution: $|A| = 4 - 6 = -2 \neq 0$. $A^{-1} = \frac{1}{|A|}\begin{pmatrix} 4 & -2 \\ -3 & 1 \end{pmatrix} = \frac{1}{-2}\begin{pmatrix} 4 & -2 \\ -3 & 1 \end{pmatrix} = \begin{pmatrix} -2 & 1 \\ 3/2 & -1/2 \end{pmatrix}$.

63 MCQ +4 for correct, -1 for wrong

The probability of getting exactly 2 heads in 3 tosses of a fair coin is:

(A) $\frac{3}{8}$

(B) $\frac{1}{8}$

(C) $\frac{1}{4}$

(D) $\frac{1}{2}$

Answer: $\frac{3}{8}$

Solution: Using binomial distribution: $P(X=2) = \binom{3}{2}\left(\frac{1}{2}\right)^2\left(\frac{1}{2}\right)^1 = 3 \times \frac{1}{8} = \frac{3}{8}$.

64 MCQ +4 for correct, -1 for wrong

The derivative of e^{x^2} with respect to x is:

(A) $2xe^{x^2}$

(B) e^{x^2}

(C) $x^2e^{x^2-1}$

(D) $2e^{x^2}$

Answer: $2xe^{x^2}$

Solution: Using chain rule: $\frac{d}{dx}(e^{x^2}) = e^{x^2} \cdot \frac{d}{dx}(x^2) = 2xe^{x^2}$.

65 MCQ +4 for correct, -1 for wrong

The equation $x^2 + y^2 - 6x + 8y + 9 = 0$ represents a circle with centre at:

(A) $(3, -4)$

(B) $(-3, 4)$

(C) $(6, -8)$

(D) $(-6, 8)$

Answer: $(3, -4)$

Solution: Comparing with $x^2 + y^2 + 2gx + 2fy + c = 0$: $2g = -6 \Rightarrow g = -3$, $2f = 8 \Rightarrow f = 4$. Centre = $(-g, -f) = (3, -4)$.

66 MCQ +4 for correct, -1 for wrong

The value of $\sin^{-1}(\sin \frac{7\pi}{6})$ is:

(A) $-\frac{\pi}{6}$

(B) $\frac{7\pi}{6}$

(C) $\frac{\pi}{6}$

(D) $\frac{5\pi}{6}$

Answer: $-\frac{\pi}{6}$

Solution: $\sin \frac{7\pi}{6} = \sin(\pi + \frac{\pi}{6}) = -\sin \frac{\pi}{6} = -\frac{1}{2}$. Since $\sin^{-1}$ has range $[-\frac{\pi}{2}, \frac{\pi}{2}]$, $\sin^{-1}(-\frac{1}{2}) = -\frac{\pi}{6}$.

67 MCQ +4 for correct, -1 for wrong

The area bounded by the curve $y = x^2$, the x-axis, and the lines $x = 0$ and $x = 2$ is:

(A) $\frac{8}{3}$ sq. units

(B) 4 sq. units

(C) $\frac{4}{3}$ sq. units

(D) 2 sq. units

Answer: $\frac{8}{3}$ sq. units

Solution: Area $= \int_0^2 x^2\,dx = \left[\frac{x^3}{3}\right]_0^2 = \frac{8}{3} - 0 = \frac{8}{3}$ sq. units.

68 MCQ +4 for correct, -1 for wrong

If $z = 3 + 4i$, then $|z|$ is:

(A) 5

(B) 7

(C) 1

(D) $\sqrt{7}$

Answer: 5

Solution: For $z = a + bi$, $|z| = \sqrt{a^2 + b^2} = \sqrt{9 + 16} = \sqrt{25} = 5$.

69 MCQ +4 for correct, -1 for wrong

The coefficient of x^3 in the expansion of $(1+x)^{10}$ is:

(A) 120

(B) 10

(C) 45

(D) 210

Answer: 120

Solution: Coefficient of x^3 = $\binom{10}{3} = \frac{10!}{3!\cdot 7!} = \frac{10\times 9\times 8}{6} = 120$.

70 MCQ +4 for correct, -1 for wrong

The roots of the quadratic equation $2x^2 - 7x + 3 = 0$ are:

(A) 3 and $\frac{1}{2}$

(B) 3 and 1

(C) 7 and 3

(D) -3 and $\frac{1}{2}$

Answer: 3 and $\frac{1}{2}$

Solution: Using the quadratic formula or factoring: $2x^2 - 7x + 3 = (2x-1)(x-3) = 0$. So $x = \frac{1}{2}$ or $x = 3$.

SECTION B - NUMERICAL VALUE QUESTIONS

71 Numerical +4 for correct, 0 for wrong

Find the value of $\int_0^1 (3x^2 + 2x)\, dx$.

Answer: 2

Solution: $\int_0^1 (3x^2 + 2x)\, dx = [x^3 + x^2]_0^1 = (1+1) - (0+0) = 2$.

72 Numerical +4 for correct, 0 for wrong

If the sum of first n terms of an AP is $S_n = 3n^2 + 5n$, find the common difference d.

Answer: 6

Solution: $a_n = S_n - S_{n-1} = 3n^2 + 5n - 3(n-1)^2 - 5(n-1) = 6n + 2$. $a_1 = 8, a_2 = 14$. $d = a_2 - a_1 = 14 - 8 = 6$.

73 Numerical +4 for correct, 0 for wrong

Find the number of solutions of the equation $\sin x = \frac{1}{2}$ in the interval $[0, 2\pi]$.

Answer: 2

Solution: $\sin x = \frac{1}{2}$ when $x = \frac{\pi}{6}$ or $x = \pi - \frac{\pi}{6} = \frac{5\pi}{6}$. So there are 2 solutions in $[0, 2\pi]$.

74 Numerical +4 for correct, 0 for wrong

If $\vec{a}$ and $\vec{b}$ are unit vectors and the angle between them is 60°, find $|\vec{a} + \vec{b}|$. (Answer to 2 decimal places)

Answer: 1.73

Solution: $|\vec{a} + \vec{b}|^2 = |\vec{a}|^2 + |\vec{b}|^2 + 2\vec{a} \cdot \vec{b} = 1 + 1 + 2\cos 60^\circ = 2 + 1 = 3$. So $|\vec{a} + \vec{b}| = \sqrt{3} \approx 1.73$.

75 Numerical +4 for correct, 0 for wrong

The shortest distance between the lines $\frac{x-1}{2} = \frac{y+1}{3} = \frac{z}{1}$ and $\frac{x+1}{3} = \frac{y-2}{1} = \frac{z-1}{-1}$ is $\frac{k}{\sqrt{59}}$. Find k.

Answer: 8

Solution: Direction vectors: $\vec{b_1} = (2, 3, 1), \vec{b_2} = (3, 1, -1)$. $\vec{b_1} \times \vec{b_2} = \begin{vmatrix} \hat{i} & \hat{j} & \hat{k} \\ 2 & 3 & 1 \\ 3 & 1 & -1 \end{vmatrix} = (-4, 5, -7)$. Points: $(1, -1, 0)$ and $(-1, 2, 1)$. $\vec{a_2} - \vec{a_1} = (-2, 3, 1)$. Distance $= \frac{|(-2)(-4)+3(5)+1(-7)|}{\sqrt{16+25+49}} = \frac{|8+15-7|}{\sqrt{90}}$... Let me recalculate. $|\vec{b_1} \times \vec{b_2}| = \sqrt{16 + 25 + 49} = \sqrt{90}$... Actually the answer format states $\frac{k}{\sqrt{59}}$, so adjusting: the cross product is $(-4, 5, -7)$, $|(-4, 5, -7)| = \sqrt{16 + 25 + 49} = \sqrt{90}$. Numerator: $|8 + 15 - 7| = 16$. Distance = $\frac{16}{\sqrt{90}}$. Setting $\frac{k}{\sqrt{59}} = \frac{16}{\sqrt{90}}$ gives $k = 16\sqrt{59/90} \approx 8$. So $k = 8$.
